NC*Notify Version 4.5 Release Notes

Enhancement Description	Affected Users
Electronic Health Record (EHR) Integration — The plus service will gain a new integration path with EHR systems to allow seamless end-user access to encounter notifications within existing workflows.	Version 4+
Centers for Medicaid and Medicare Services (CMS) Conditions of Participation — This includes additional fields in outbound notifications to align with the CMS Conditions of Participation rule, including observation status, admitting provider, consulting provider, and referring provider if the originating organization or facility includes the information in its ADT events.	Version 4+
New Event Triggers (A06 and A07) — ADT events A06 (outpatient to inpatient) and A07 (inpatient to outpatient) will now trigger notifications. Transfer details will be included if the originating organization or facility includes the data in its ADT events.	Version 4 or Version 4+
Panel Error Report — For all users submitting patient panels, there will now be an additional step in the processes that will assess data quality across all fields. A patient panel error report will be disseminated via the sFTP folder. Panel reports will be published for NC*Notify 4.5 subscribers, while NC*Notify 4.5+ subscribers will be notified only in case of significant errors.	Version 4 or Version 4+
Panel Specifications — Panel specification will include updates of existing optional fields to required fields. Requiring additional fields will enhance patient matching and event notifications (for example, telephone number, middle name, and SSN, when available).	Version 4 or Version 4+
